PROFESSIONAL SUMMARY

Full stack developer and final-year Systems Engineering student. I currently build software for the Atlántico Secretariat of Education, focused on process automation and information systems. I work mainly with Python, Flask, React and SQL databases, and I have experience in requirements gathering, data modeling, automated testing and deployment on Google Cloud. I have worked remotely and in interdisciplinary teams, and I am used to working directly with non-technical users.

EXPERIENCE

Systems Engineering Intern — Atlántico Department Government, Secretariat of Education *Aug 2026 – Present*

- Deployed to production a PDF-to-TIF OCR converter that automates scan classification and cuts file size by 75%.
- Design a centralized IT-inventory system for 200+ school sites across 20 municipalities: gathered requirements, assessed 2,000+ historical records and modeled a database that unifies three incompatible formats.
- Build its Google Apps Script web app: token-based access, autosave, concurrency control and 40+ automated tests.
- Provide equipment maintenance and technical support to staff, and documented the technical design and the data policy.

PROJECTS

HealthByte — TypeScript, React, Node.js, PostgreSQL, Vertex AI *github.com/LeoBarraza0/HealthByte*

- Voice-driven surgical safety board deployed on Google Cloud Run, built at a hackathon by an interdisciplinary team of five. I contributed computer-vision instrument counting and requirements analysis.

Greenity — Python, Flask, SQLAlchemy, MySQL, Leaflet.js, Docker *github.com/LeoBarraza0/Greenity*

- Recycling web app with a REST API, web scraping and an interactive map. Lead developer in a team of three.

Rennor — Python, TensorFlow, pandas, Flask, Next.js *github.com/LeoBarraza0/Rennor*

- Relative-humidity forecasting for Barranquilla with recurrent neural networks trained on sensor data.

EDUCATION

B.S. in Systems Engineering — Universidad Libre, Barranquilla *2023 – Present*

Software Analysis and Development Technologist — SENA, online *2024 – Present*

Relevant coursework: WAN Networks, Operating Systems, Databases, Artificial Intelligence, Computer Forensics.

RESEARCH AND ACTIVITIES

- *Technology-Driven Strategies for Emotional Well-Being in Higher Education: A Systematic Literature Review*. IEEE C3, 2025. DOI: 10.1109/C366505.2025.11340093. Presenter.
- Speaker at RedColsi research meetings (2025, 2026) · Barranqu-IA Hackathon 2025 (GDG) · Unilibre Hackathon 2025.

SKILLS

Programming languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS

Web development: Flask, SQLAlchemy, React, Next.js, Node.js, Google Apps Script, REST APIs

Data and AI: MySQL, PostgreSQL, MongoDB, pandas, scikit-learn, TensorFlow, Power BI

Cloud and tools: Google Cloud (Cloud Run, Vertex AI), Git/GitHub, Docker, Postman, Tesseract OCR, Claude Code

Infrastructure: LAN/WAN networking in Cisco Packet Tracer, VLANs, IP addressing, hardware maintenance

Professional: Scrum, communication with non-technical users, teamwork, time management, public speaking

Languages: Spanish (native) · English (B2)
